Do you smoke cigarettes?

If you are a man or woman, 18-55 years old, living in the Raleigh-Durham-Chapel Hill area, and smoke tobacco cigarettes, please join an important study on the health effects of smoking and vaping being conducted by the National Institute of Environmental Health Sciences (NIEHS).

What’s Required?

• One visit to donate blood, urine, and saliva samples
• Samples will be collected at the NIEHS Clinical Research Unit in Research Triangle Park, North Carolina
• Volunteers will be compensated up to $60

Who Can Participate?

• Healthy men and women aged 18-55
• Current cigarette smokers
• The definition of healthy for this study means that you feel well and can perform normal activities. If you have a chronic condition, such as high blood pressure, healthy can also mean that you are being treated and the condition is under control.
