

Smoke Exposure COVID-19 Study

This study will help determine if smoking increases the risk of developing coronavirus disease 2019 (COVID-19), and will evaluate the effect of COVID-19 on the immune system of people who smoke.

Who can participate?

- Men and women ages 30-55.
- Current cigarette or vaping device users.
- No prior or current cancer diagnosis.
- A body mass index of less than 35.

What is required?

- Six visits to donate blood, saliva, nasal cell and cheek cell samples, and answer medical questionnaires.
- Antibody testing to see if you had COVID-19 in the past.
- Ability to travel to the National Institute of Environmental Health Sciences (NIEHS) Clinical Research Unit in Research Triangle Park, North Carolina.
- Participants compensated up to \$700.

Who is running the study?

A team, led by Doug Bell, Ph.D., and Stavros Garantziotis, M.D., at the National Institute of Environmental Health Sciences (NIEHS) Clinical Research Unit in Research Triangle Park, North Carolina.
